

# High-speed Internet Access

## ADSL and Telkom Fibre

We use Telkom infrastructure to provide you with connectivity. Telkom recently launched Telkom fibre. Fibre has changed the way we use the web. For the first time ever video streaming, remote CCTV viewing and IP TV work perfectly. These high bandwidth services need high quality bandwidth and high quality data. Our data packages work through ADSL or Telkom fibre. Telkom fibre provides you with much lower (better) latency (the time it takes for a data packet to travel to the Internet and back) than ADSL. Unfortunately not all areas are Telkom fibre enabled. Contact us to find out if your neighbourhood has Telkom fibre connectivity.

- High quality data with low contention ratios
- Get 200 percent more data with night data for the same price
- Online, SMS and email usage notifications and top-up
- No hidden costs
- Static IP addresses can be purchased should you need the service
