

Cloud PBX

A full phone system. Nothing on your premises.

Jenny Cloud PBX is a complete business phone system hosted in the cloud. Everything a traditional PBX does, without the hardware purchase, the maintenance contract, or the certainty that it will be obsolete in five years.

Why choose Jenny Cloud PBX?

- No on-site PBX hardware to buy or replace
- Three extensions or two thousand, across as many branches as you have
- Extensions in different branches work as one system
- Free calls between all your extensions
- Easy-to-use smartphone app
- Add extensions as you hire, without an engineer visit
- Keep your existing number where porting is available

Built for business

Traditional PBX hardware forces a choice between buying more capacity than you need and replacing the system when you outgrow it. A hosted system removes the choice. You pay for the extensions you are using this month, and next month you can use more.

What's included

- Custom company greeting
- Ring groups and call routing
- Easy extension setup and management
- Internal extensions across multiple branches
- Remote working support for home-based staff
- Call forwarding, voicemail and more
- Requires a matching VoIP subscription and SIP-capable handsets

Support you can rely on

7-day support, including public holidays, through our call centre, chat assistant and website. Backed by local technicians in your own country.
