

Dedicated Fibre

Premium fibre with a wireless safety net.

Jenny Dedicated Fibre delivers high-performance connectivity for businesses that cannot afford downtime. Scalable to 1Gbps [VERIFY], with automatic failover to Dedicated Wireless where feasible, so a cable break does not stop your business.

Why choose Jenny Dedicated Fibre?

- Symmetrical speeds, scalable to 1Gbps
- Automatic failover to wireless where feasible
- Backup runs on separate infrastructure. Not a second cable in the same trench
- Up to 5 public routable IP addresses included
- SLA-backed with committed uptime
- Wireless connection provided while your fibre is installed, where feasible
- Full range of IP services

Built for business

For organisations where an outage costs money by the hour. Because we run a national wireless network alongside our fibre, we can offer a backup link that cannot be cut by the same excavator. Most fibre providers cannot, because they only own one kind of network.

What's included

- Up to 5 public routable IP addresses
- Automatic failover to Dedicated Wireless where feasible
- SLA with committed uptime
- Interim wireless connection during fibre installation, where feasible

Support you can rely on

Jenny Internet provides dependable support backed by experienced technical specialists and local assistance. Our call centre is staffed by knowledgeable experts who work closely with your company and IT team to deliver fast, effective solutions and keep your business running smoothly.
